CMPE2550 – ICA09 [ASP] – SQL Server and Data Manipulation

In this exercise, you will incorporate ASP Core functionality, connection to database. You will begin your familiarity with the Microsoft SQL Server management Studio, use ASP Core and ADO to execute manipulation queries against a SQL Server database.

Appropriate **REST methods must be used** instead of doing all operations with Get/Post alone.

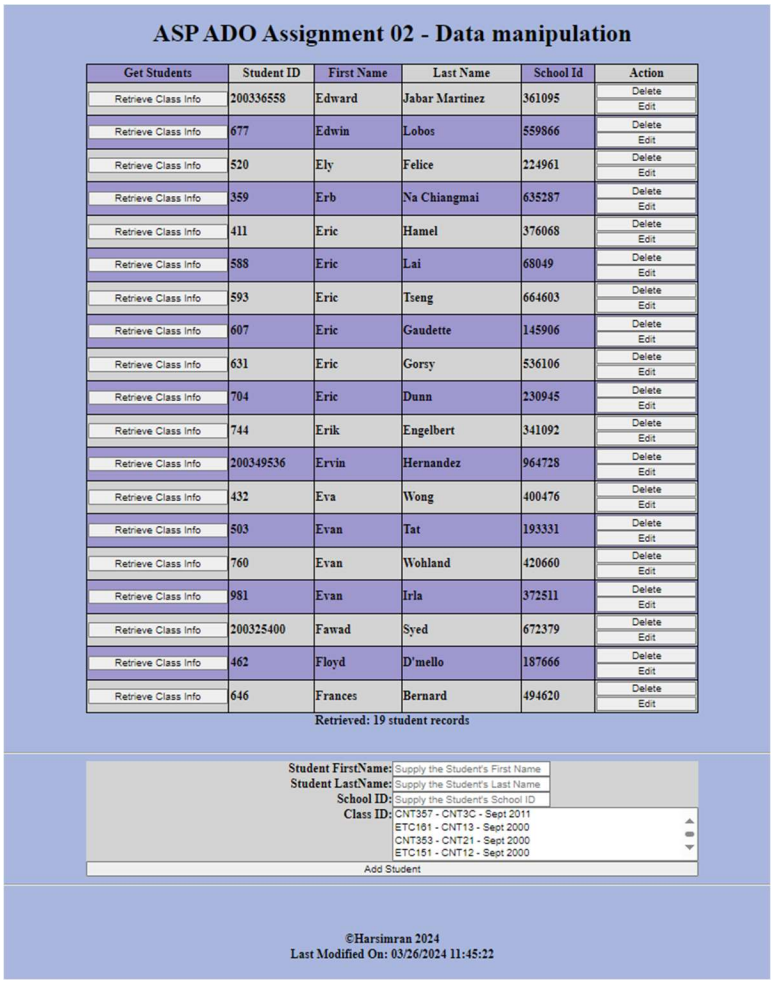
Validate and sanitize all inputs **on server side**.

ClassTrak Database

You will have been shown in class how to link your databases to ASP Core files using ADO.

Begin with Slight Adjustments to Assignment 08

To avoid reinventing the wheel, copy all your files from Assignment 08 into a new Assignment 09 folder. Once this is completed, your first task is to include the addition of Delete and Edit buttons to the students table as shown below:



ASP ADO Assignment 02 - Data manipulation

Get Students	Student ID	First Name	Last Name	School Id	Action
Retrieve Class Info	200336558	Edward	Jabar Martinez	361095	Delete Edit
Retrieve Class Info	677	Edwin	Lobos	559866	Delete Edit
Retrieve Class Info	520	Ely	Felice	224961	Delete Edit
Retrieve Class Info	359	Erb	Na Chiangmai	635287	Delete Edit
Retrieve Class Info	411	Eric	Hamel	376068	Delete Edit
Retrieve Class Info	588	Eric	Lai	68049	Delete Edit
Retrieve Class Info	593	Eric	Tseng	664603	Delete Edit
Retrieve Class Info	607	Eric	Gaudette	145906	Delete Edit
Retrieve Class Info	631	Eric	Gorsy	536106	Delete Edit
Retrieve Class Info	704	Eric	Dunn	230945	Delete Edit
Retrieve Class Info	744	Erik	Engelbert	341092	Delete Edit
Retrieve Class Info	200349536	Ervin	Hernandez	964728	Delete Edit
Retrieve Class Info	432	Eva	Wong	400476	Delete Edit
Retrieve Class Info	503	Evan	Tat	193331	Delete Edit
Retrieve Class Info	760	Evan	Wohland	420660	Delete Edit
Retrieve Class Info	981	Evan	Irla	372511	Delete Edit
Retrieve Class Info	200325400	Fawad	Syed	672379	Delete Edit
Retrieve Class Info	462	Floyd	D'mello	187666	Delete Edit
Retrieve Class Info	646	Frances	Bernard	494620	Delete Edit

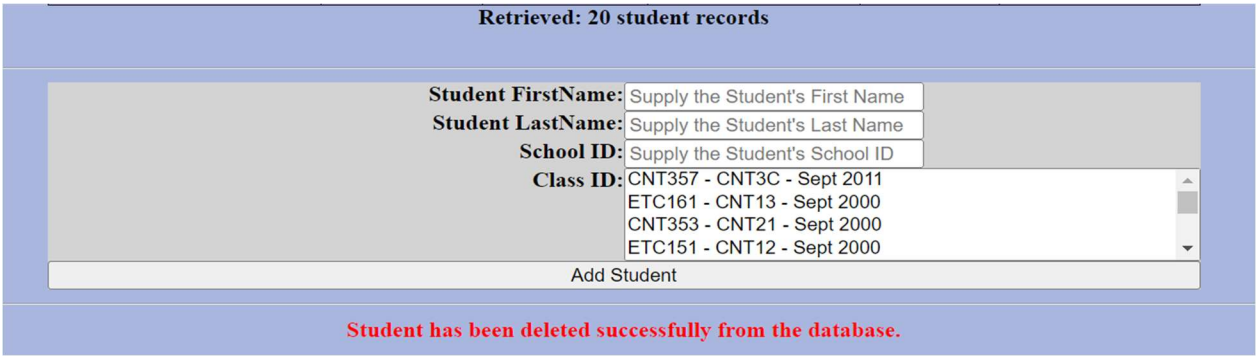
Retrieved: 19 student records

Student FirstName: Supply the Student's First Name
Student LastName: Supply the Student's Last Name
School ID: Supply the Student's School ID
Class ID: CNT357 - CNT3C - Sept 2011
ETC161 - CNT13 - Sept 2000
CNT353 - CNT21 - Sept 2000
ETC151 - CNT12 - Sept 2000

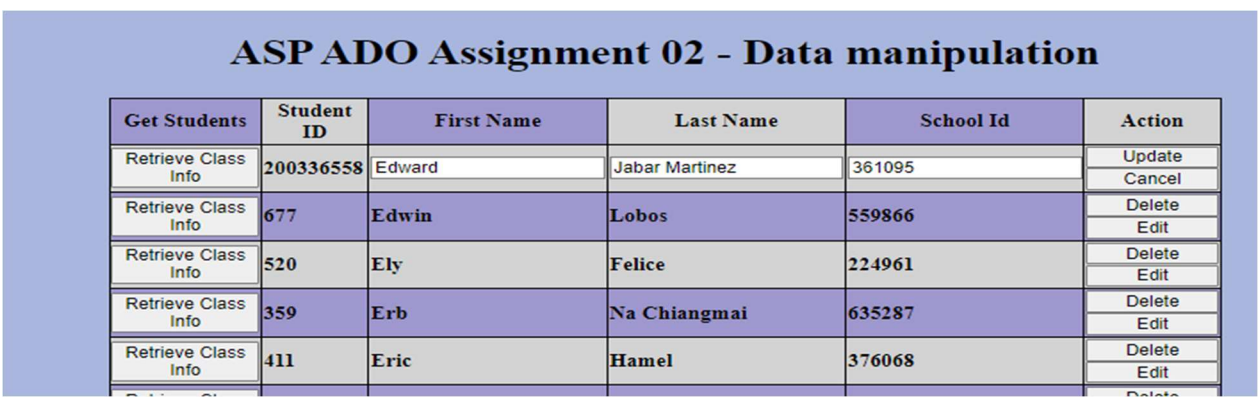
Add Student

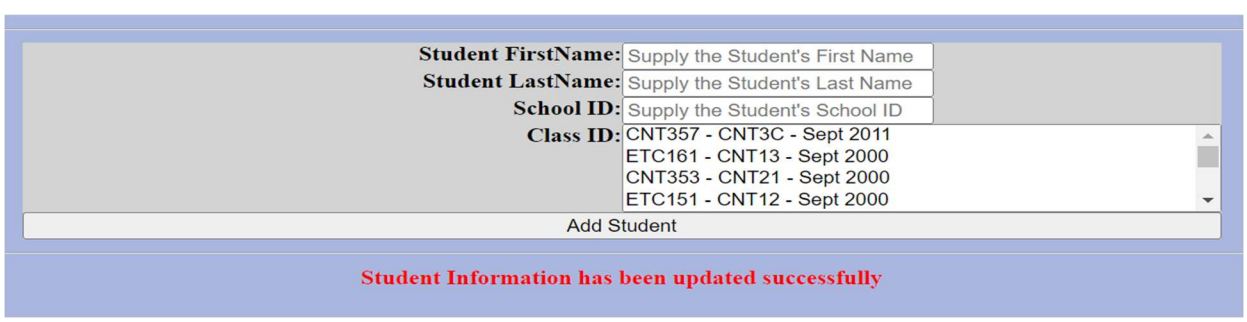
©Harsimran 2024
Last Modified On: 03/26/2024 11:45:22

When a **Delete button** is clicked, you shall cause the associated student to be deleted from your database table and give a message to user. Remember that all the results and classes records associated with the student must be removed as well so that you do not have polluted data.



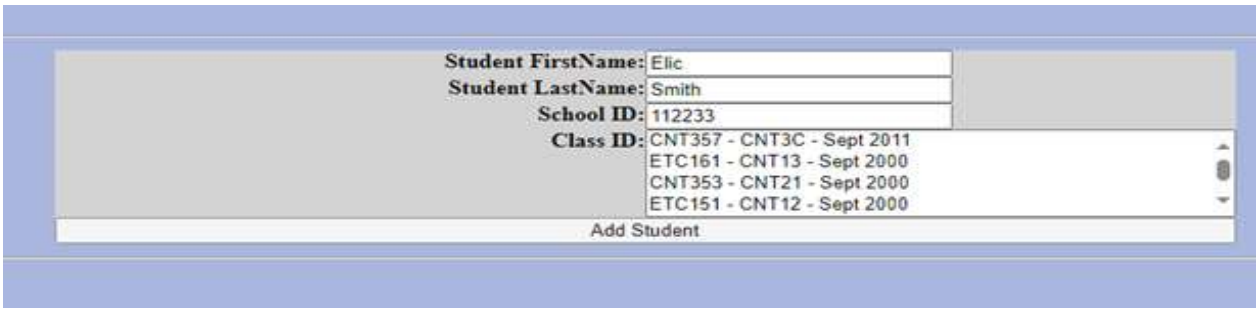
When the **Edit button** is clicked, you shall present the user with an adjusted UI that allows the user to adjust the student's information. The Student ID shall not be permitted to be changed, but the FirstName, LastName, and School Id are fair game. The school Id field must be bullet proofed to ensure a positive numeric value greater than zero has been supplied by the user. If cancel is clicked, no changes shall occur. Remember to refresh the students display once a student has been deleted or updated, and to message the user. If cancel is clicked, restore the original UI. An example updated UI for when Edit is clicked is shown below:



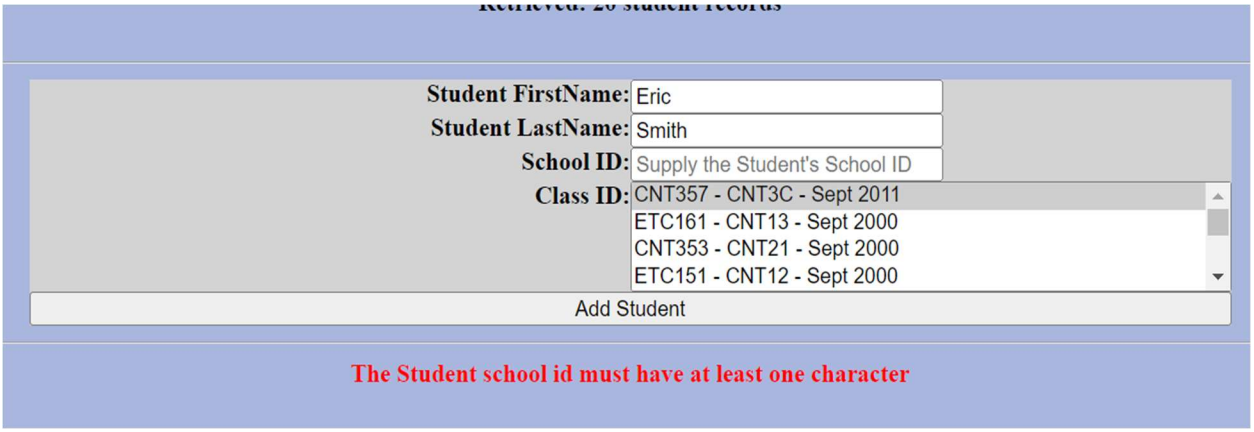


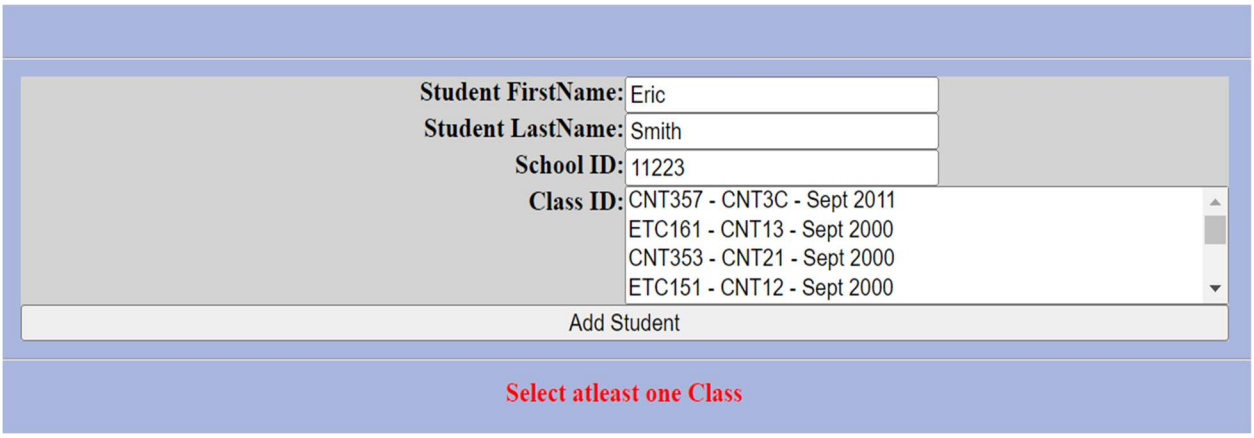
Adding New Student

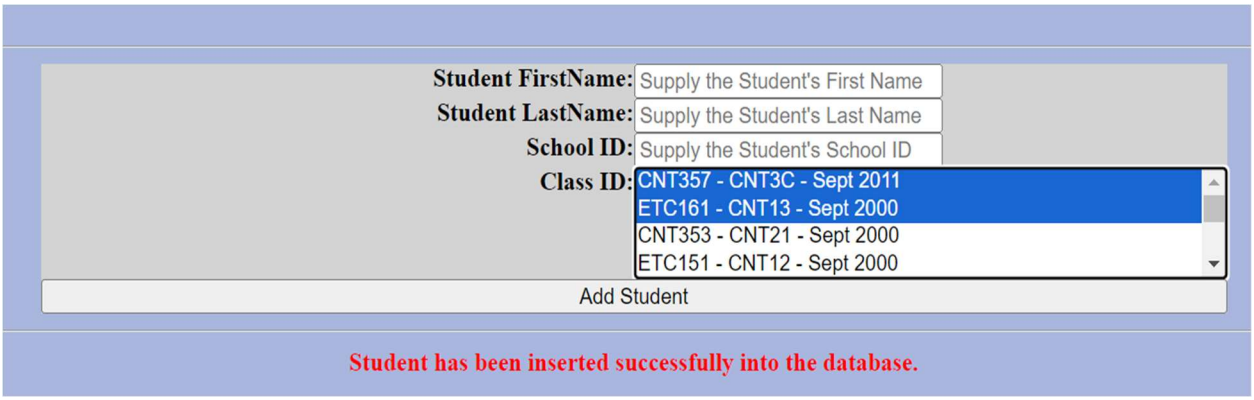
We shall allow for a new student to be added. Add a block at the bottom of the page similar to that seen in the following image [Above part is truncated to show bottom part]:



The user is required to supply all the information shown. Multiple Classes are permitted (you need only include as one of the select attributes multiple="multiple" (most verbose version), and then more than one choice may be selected using the Ctrl key while clicking. Don't forget to message the user with status updates! Displaying your all status messages below adding student form.







Remember that you will need to create the classes records to connect your new student to its classes. As with the Edit functionality, the school Id must be a numeric value greater than zero to be accepted.

Consistent with Delete and Edit, be sure to refresh the student list.

Note: This will be a living document as it is the first time it is being delivered. If typos are encountered, or an explanation is not clear or seems incomplete, please approach your instructor about it so that the feedback may be passed to the document creator. If the fix is complex enough, this document will be added to or changed, and the class alerted. Do keep in mind that you are expected to do some of the thinking and specific design, so this document has not been designed as a step-by-step recipe for completing the assignment, but more intended as a discussion of the requirements.
