

# CMPE2550 – ASP ICA04 – mySQL and Data Manipulation

---

In this assignment, you will reinforce your familiarity with the mySQL RDMS and use PHP to execute data manipulation queries against a mySQL database.

As with the previous assignment, most of what you have already learned while working with SQL Server is still valid if you adhere to ANSI SQL syntax, but not everything. As a reference, you will want to refer to W3Schools for general mySQL differences.

<https://www.w3schools.com/MySQL/>

You may also encounter some differences between storage engines or versions of mySQL. For instance, some storage engines ignore foreign key constraints and they all ignore check constraints before mySQL version 8.0.15.

## Begin with Slight Adjustments to Assignment 03

To avoid reinventing the wheel, copy all of your files from Assignment03 into a new Assignment04 folder. Once this is completed, your first task is to include the addition of Delete and Edit buttons to the titles table as shown below:

Assignment 04 – mySQL Data Manipulation					
Get Books	Author Id	Last Name	First Name	Phone	
Retrieve	409-56-7008	Bennet	Abraham	415 658-9932	
Retrieve	648-92-1872	Blotchet-Halls	Reginald	503 745-6402	
Retrieve	238-95-7766	Carson	Cheryl	415 548-7723

Retrieved : 23 author records

  

Action	Title Id	Title	Type	Price
Delete	MC3021	The Gourmet Microwave	mod_cook	19.99
Edit	PS2091	Is Anger the Enemy?	psychology	19.99

Retrieved : 2 title records

As with the retrieve button, you will want to choose strategic IDs for the buttons to make your life easier when you try to extract information to send to the server. All operations will be performed via AJAX calls.

When a Delete button is clicked, you shall cause the associated book to be deleted from your database table. Remember that all of the titleauthor records associated with the book must be removed as well so that you do not have polluted data.

When the edit button is clicked, you shall present the user with an adjusted UI that allows the user to adjust the book's information. The TitleID shall not be permitted to be changed, but the title, type, and price are fair game. The user shall only be permitted to choose book types that already exist in the titles table (a retrieval query along with a select control is suggested here for display purposes, but there must also be a double-check on the server when submitting the changed data). The price field must be bullet-proofed to ensure a positive numeric value greater than zero has been supplied by the user. If cancel is clicked, no changes shall occur.

Remember to refresh the books display for the currently selected author once a book has been deleted or updated, and to message the user. If cancel is clicked, restore the original UI.

An example updated UI for when Edit is clicked is shown below:
